SYSTEMS

Sunnydock Features

Description	SUNNYDOCK range has been designed for all projects, especially for installations in open sea or other areas exposed to frequent wind and/or waves. It gives to your dock the perfect flexibility which will avoid damages to your installation.					
Connecting System	Each cube is equipped with four ears which allow them to be interlocked. One connecting Pin will hold 4 floating docks together and the outside screws placed on the edge of the platform will hold the total structure together.					
Technical Data	Product Code	Product Name	Flotation Capacity (Units / kg)	Length (cm)	Width (cm)	Height (cm)
	* SDS-01010	SD Sunny Cube 50 X 50	90	50	50	40
	SDS-01020	SD Double Sunny Cube 50 X 100	180	50	100	40
	<small>*The SDS-01020 will be available in 2009</small>					
Technical Description	Each cube has a textured and non-skid surface to avoid injuries. Drainage troughs located on the top surface which prevent standing water. Dimensions of the cubes enable flexibility.					
Colors	Standard Colors		For projects exceeding 300 m ² , these colors can be used

Connecting and anchoring items

Short connection pin

Outside screw

Post cube

Mooring kit

Rotodock Features

Description

ROTODOCK range includes several sizes of sections which allows almost all required configurations. It has been designed for all projects located on lakes, rivers, bays and other protected sea areas. It provides a tremendous stability, outstanding load capacity and safety.

Connecting System

The dock sections can be connected by using the virgin rubber connecting system. The top and bottom couplers are connected to each other by composite bolt and nuts which eliminate the risk of rust in all water conditions.

Technical Data

Product Code	Product Name	Relative Capacity (Unit / kg)	Length (cm)	Width (cm)	Height (cm)
RDS-01010	RD Dock section 100X150	450	100	150	28
RDS-01020	RD Dock section 100X300	900	100	300	28
RDS-01030	RD Dock section 150X300	1.350	150	300	28
RDS-01040	RD Dock section 200X300	1.800	200	300	28

Technical Description

Each dock section include a textured and non-skid surface. Drainage troughs located on the top surface prevents standing water and individual flotation chambers located on the bottom of the dock gives a tremendous stability and flotation capacity.

Colors

One color is applied

Beige

All dock sections and accessories are produced in one standart color "beige" which has the technical specification to stay cooler to the touch than darker colors and especially in hot summer days.

Accessories

Swim ladder

Bench

Tie up cleat

Utility channel

Handrail

Corner gusset

Connecting and anchoring items

Coupler kit

Half coupler

Small bracket

Deadweight bracket

Polydock Features

Description Dock Marine Systems has created the ultimate in traditional docking systems, offering one of the most innovative solutions ever designed and manufactured. The revolutionary POLYDOCK meets the demands of today's busy waterfront and surpasses the expectations of the most demanding applications. POLYDOCK offers the traditional marina operator the flexibility and function of a customizable dock height, a choice of surfaces and built-in utility channels.

Connecting System All dock sections and accessories are connected to each other by the virgin rubber or polyethylene couplers. The connection system allows you to configure (and re-configure) your floating docks to meet your current or future needs.

Technical Data

Product Code	Product Name	Flotation Capacity (Liters / Kg)	Length (cm)	Width (cm)	Height (cm)
PDS-01010	PD Dock section 1000x300	1,070	300	100	37
PDS-01100	10 Finger Section 900x300	540	300	90	52

Technical Description Polydock is the only modular floating dock offering the choice between three different types of surfacing: slip-resistant beige polyethylene, wood and composite.

- Each dock section include a textured non-skid surface, drainage troughs located on the top surface which prevent standing water.
- The dock sections offer tremendous stability and flotation with the individual flotation chambers located at the bottom of the dock.
- Each dock section include in-molded utility channels, which saves you from expensive accessories to bring electricity, water and telecommunication to your boat.

Dock Marine Features

Raw Material	All products are made out of polyethylene raw material. The polyethylene is environment friendly and does not interact with water and nature. The material used in the dock structure provide resistance to rust, corrosion, and effects of any fuel.
Accessories	All products include many accessories which are made out of either polyethylene or galvanised steel. For example: Pipe bracket, corner gusset, bench, polyethylene gangway, floating dock adaptor, bumpers, utility channels and many more.
Characteristics	<ul style="list-style-type: none"> • Low maintenance • Four-seasons accessible • High temperature resistance • Outstanding UV resistant polyethylene • Resistant to saltwater, chemicals and most acids. • High elastic resistance to shocks • Rounded edges
Various Applications	Swimming platforms, rowing clubs, private docks, work platforms, fish-farms, temporary bridges, offshore installations, marinas, event platforms, floating walkway, moorings for boats, floating houses and all floating projects.

Our new release the new **V slide** section is dedicated to welcome your jet ski or small boat.
